12 February 2021

Introduction

Seabird studies are an integral part of the California Cooperative Oceanic Fisheries Investigation (CalCOFI), California Current Ecosystem - Long-term Ecological Research (CCE-LTER), and Southern California Coastal Ocean Observing System (SCCOOS) programs. The seabird data are valuable for several reasons. First, information on seabird distribution and abundance provides an upper trophic level perspective which complements the lower trophic level plankton and hydrographic data collected by others. Second, estimates of seabird abundance, diversity, and distribution contribute to understanding the spatial ecology of the Southern California Bight and adjacent marine habitats (e.g., Santora et al. 2017), a region characterized by substantial temporal environmental heterogeneity and a major biogeographic boundary associated with Point Conception. Third, by extending our existing records (currently over 30 years and building; 1987–present) and coupling this information with long-term hydrographic and plankton data, seabird data contribute to understanding the effects of climate variability and change on the southern sector of the CCE (e.g., Veit et al. 1996, Hyrenbach and Veit 2003, Santora and Sydeman 2015, Sydeman et al. 2015). Other anthropogenic impacts for this region include coastal oil and gas development and shipping, as well as other biotic changes due to fisheries and other extractive uses of marine life. Seabirds may be responsive to all of these factors.

This data report summarizes observations made during the 2021 winter CalCOFI/CCE-LTER cruise. We present basic data on survey effort as well as summary information on seabird distribution and abundance.

Methods

Observations of seabirds are made continuously during daylight ship transits between oceanographic and plankton sampling stations. The observer, located on the bridge approximately 15 meters above sea level, uses hand-held binoculars to assist in the identification and enumeration of birds. The observer records all birds seen within a 300-meter strip transect to one side and front of the vessel while the ship is underway at > 5 knots. Observations are entered into a portable computer using the dedicated application "DLog"; the ship's position is automatically recorded periodically from an external GPS every 20 seconds. Each observation includes the species, the number of individuals observed, and their behavior (mostly "flying" or "sitting on the water"). Observation data are post-processed using standardized species codes, validation of positioning data, and binning of observations into along-track sections of 3 km in length. The data are then integrated into a survey database which includes data from 1987 to the present. These data are used to derive summary statistics.

Table 1. The following criteria were applied to the survey database to select data for the summary.

Criteria	Value
Behavior codes included	All values
Species categories included	Birds, Unidentified
Species categories excluded	Mammals, Fish, Excluded Species List
Year	2021
Month	All
Bin length	All bins > 0.1 km
Region	Lines 77-93 (core area only)
Season	Winter

Taxa excluded from this summary were all mammals, fish, terrestrial birds, and most shorebirds except phalaropes, which are largely pelagic. Species density is calculated as the total number of individuals observed per species divided by the area (km²) surveyed. Density over time is shown for select species of warm- and cold-water affinities, 1987–2021. For this winter survey, we have defined species with warm-water affinity to include black-footed albatross, black-vented shearwater, and brown pelican (Hyrenbach and Veit 2003). Cold-water affinity species include Brandt's cormorant, Cassin's auklet, common murre, and rhinoceros auklet (Hyrenbach and Veit 2003).

Results

A summary of survey effort is shown in Table 2 and transects surveyed are shown in Figure 1. Summarized species observations for all species in the core area are shown in Table 3 (see Appendix 1 for exclusions). A total of 20 days of survey effort covering 1,461 km (438 km²) of ocean habitat was tallied over the entire survey. Density over time for the selected seabird species (listed above) was calculated and is shown (as anomalies) in Figures 2 (warm-water affinity) and 3 (cold-water affinity), and for all species of seabirds (Figure 4).

There were a couple notable results from the 2021 winter survey for these species. All four of the focal cold-water species from this survey had near-average density (Figure 3), with Cassin's auklet, common murre, and rhinoceros auklet being just slightly below average density while Brandt's cormorant, the most sub-tropical species of this group, was slightly above average. The warm-water species, on the other hand, had higher than average density (Figure 2). Density of brown pelicans in 2021 was the highest of the time series thus far (Figure 2), which may reflect the productivity for this species at Channel Island colonies in recent years (after 2017). Interestingly, high pelican density was also observed in winter 2020. Additionally, black-vented shearwaters were present in significantly high densities, continuing an increasing trend since 2014. The general picture provided by these results is that the warm water seabird community that has been prevalent for the last several years remains in place as of winter 2021. Across all species, density was very near average for the time series (Figure 4).

Table 2. Summary of survey effort and seabird statistics for the core area and extended survey area, winter 2021.

Winter 2021	Core + extended area
Survey Vessel	RV Reuben Lasker
Start Date	1/15/2021
End Date	2/4/2021
Number of Survey Days	20
Distance Surveyed (km)	1,461
Area Surveyed (km²)	438
Number of Bird Species	31
Overall Bird Density (per km ²)	7.405
Total Individuals Counted	3,246

Figure 1. Transects sampled during the CalCOFI winter 2021 survey. The core study area is denoted with the box, and includes CalCOFI lines 93 (south) to 77 (north).

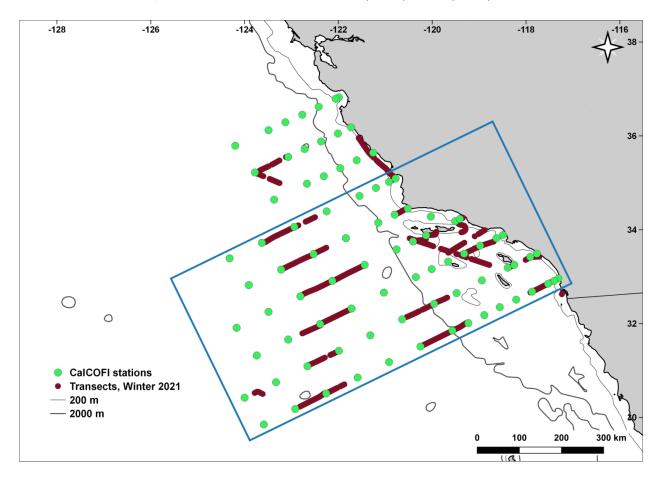

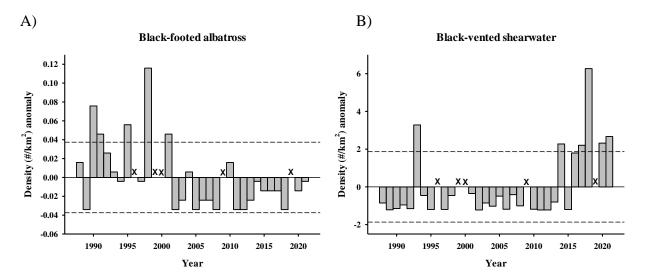

Table 3. Observations in winter 2021 by species in the core and core + extended survey area. Cell values: total number of individuals (ind.) / number of observations per species (obs.) / species density (dens.) in individuals per km².

Figure 2. Density (expressed as anomalies) over time from winter surveys for species with warm-water affinity, core survey area, 1988-2021. A) black-footed albatross, B) black-vented shearwater, and C) brown pelican. The dashed lines indicate ± 1 s.d. of the long-term mean, and 'X' indicates years when no winter survey was conducted.

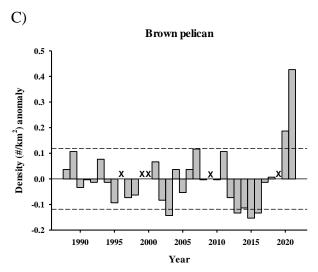

Figure 3. Density (expressed as anomalies) over time in the winter for species with cold-water affinities, core area only, 1988-2021. A) Brandt's cormorant, B) Cassin's auklet, C) common murre, and D) rhinoceros auklet. The dashed lines indicate ± 1 s.d. of the long-term mean, and 'X' indicates years when no winter survey was conducted.

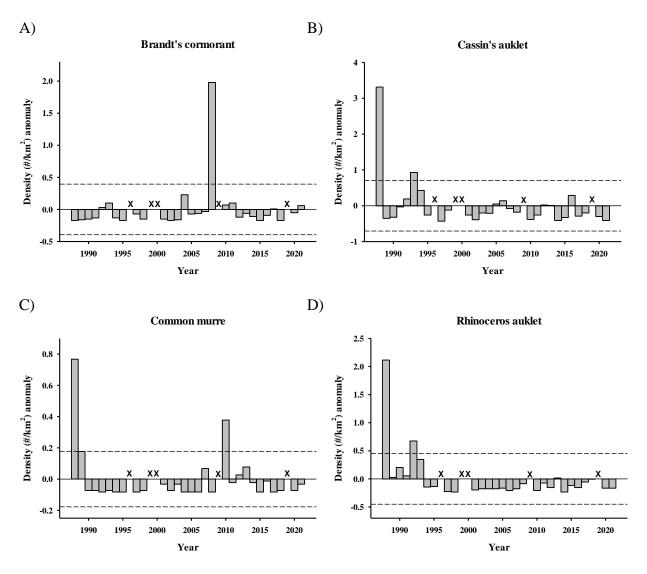

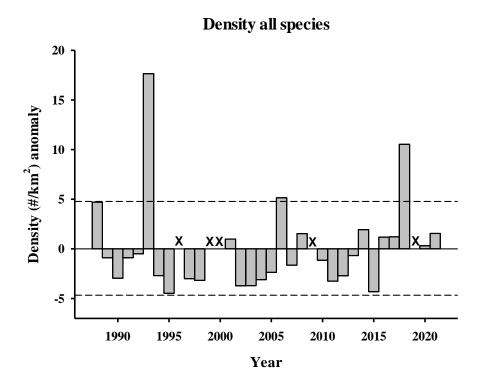

Figure 4. Density (expressed as anomalies) over time in the winter for all species in the core area only, 1988-2021. The dashed lines indicate ± 1 s.d. of the long-term mean, and 'X' indicates years when no winter survey was conducted.

Appendix 1. List of bird species excluded from this summary. These species may or may not have been observed during the survey.

Common Name	Scientific Name
American Coot	Fulica americana
Black Oystercatcher	Haematopus bachmani
Black Skimmer	Rynchops niger
Black Tern	Chlidonias niger
Black Turnstone	Arenaria melanocephala
Black-throated gray warbler	Setophaga nigrescens
Brewer's Sparrow	Spizella breweri
Brown-headed cowbird	Molothrus ater
Bufflehead	Bucephala albeola
Chapman's Storm-Petrel	Oceanodroma leucorhoa chapmani
Eurasian collared dove	Streptopelia decaocto
European Starling	Sturnus vulgaris
Great Blue Heron	Ardea herodias
Great Egret	Ardea alba
Green Heron	Butorides virescens
Least Sandpiper	Calidris minutilla
Long-billed Curlew	Numenius americanus
Long-billed Dowitcher	Limnodromus scolopaceus
Mallard Duck	Anas platyrhynchos
Marbled Godwit	Limosa fedoa
Mourning Dove	Zenaida macroura
Red-Breasted Merganser	Mergus serrator
Ruddy Duck	Oxyura jamaicensis
Sanderling	Calidris alba
Savannah sparrow	Passerculus sandwichensis
Snow Goose	Chen caerulescens
Snowy Egret	Egretta thula
Townsend's warbler	Setophaga townsendi
Unidentified Bird	(species group)
Unidentified Dowitcher	
Unidentified Goose	(species group)
Unidentified Hummingbird	(species group)
Unidentified Passerine	(species group)
Unidentified raptor	(species group)
Unidentified Shorebird	(species group)
Wandering tattler	Tringa incana
Western Sandpiper	Calidris mauri
Whimbrel	Numenius phaeopus
White-Winged Scoter	Melanitta fusca
Willet	Catoptrophorus semipalmatus
Wilson's warbler	Cardellina pusilla
Yellow-Rumped Warbler	Dendroica coronata
